

Below is a **gameplay-first roster of ten main-campaign heroes**, followed by **eight modular mini-campaign packages**. The historical roles determine each character's gameplay identity; the abilities and effects are original game concepts.

I am treating "American Revolutionary War heroes" as people who served the American cause, including foreign-born volunteers such as Lafayette and Kościuszko.

Main campaign heroes

1. George Washington — Global commander

Washington's appointment as commander in chief of the Continental Army makes him the natural strategic-control hero rather than a high-damage fighter.  National Park S...

Core mechanic — General Orders: Nearby tower attacks generate **Resolve**. Washington spends Resolve on one of three orders:

- **Hold:** Blockers and defensive towers resist damage, displacement, and panic.
- **Volley:** Ranged towers synchronize their next attacks, causing stagger and armor break.
- **Reposition:** A hero or militia unit withdraws and redeploys to another rally point.

Signature ability — Crossing the Delaware: Washington selects a threatened lane. After a short preparation period, fog conceals a strategic redeployment and a temporary Continental detachment launches a surprise attack there.

Gameplay identity: Broadly useful on every map, but personally weak unless the player coordinates several tower types around him.

2. Henry Knox — Mobile artillery commander

Knox became the Continental Army's chief artillery officer and organized the transport of captured artillery from Fort Ticonderoga toward Boston—the basis of the "Noble Train of Artillery."  Mount Vernon +1

Core mechanic — Limber and Unlimber: Knox controls a heavy field battery that can be packed up and moved between designated artillery positions.

- Limbered: Mobile, unable to fire.
- Unlimbered: Very long range, heavy splash damage, slow turning and reloading.
- Nearby supply structures improve its ammunition and setup speed.

Signature ability — Dorchester Heights: Knox converts a selected elevated position or build pad into a temporary grand battery. All artillery gains range and armor penetration while the position remains active.

Gameplay identity: Rewards advance planning. Moving at the wrong time leaves the player without heavy firepower; moving at the right time can dominate an entire wave.

3. Nathanael Greene — Attrition and withdrawal strategist

Greene's Southern Campaign repeatedly used maneuver, supply pressure, chosen battlefields, and costly withdrawals to exhaust British forces.  National Park S... +1

Core mechanic — Strategic Withdrawal: Greene establishes a **Fallback Line**.

- Towers and units behind the line can be moved or sold with a much higher refund.
- Rear defensive positions receive bonuses after a forward position is voluntarily abandoned.
- Enemies accumulate **Fatigue** based on the distance they travel, reducing speed, armor, and attack strength.

Signature ability — Race to the Dan: Friendly heroes and troops rapidly withdraw to rear positions. The pursuing wave immediately gains Fatigue, while towers behind the Fallback Line refresh part of their cooldowns.

Gameplay identity: An economy and recovery hero for players who prefer flexible defenses over holding every inch of ground.

4. Daniel Morgan — Kill-zone tactician

Morgan's plan at Cowpens culminated in a double envelopment that used militia, Continentals, and cavalry in coordinated stages.  National Park S... +1

Core mechanic — Three Defensive Lines: Morgan places three tactical markers along a lane:

1. **Skirmisher Line:** Long-range opening shots slow and expose enemies.
2. **Militia Line:** Fires a volley and then conducts a controlled retreat.
3. **Continental Line:** Holds enemies in place for the final engagement.

Enemies struck at all three lines become **Enveloped**.

Signature ability — Double Envelopment: Towers and troops positioned on both sides of the road concentrate fire inward on Enveloped enemies while a temporary cavalry reserve attacks their rear.

Gameplay identity: The roster's advanced setup-and-combo hero. Extremely powerful when the player has time and space to prepare the battlefield.

5. Francis Marion — Guerrilla and ambush specialist

Francis Marion, popularly known as the “Swamp Fox,” became associated with mobile operations, ambushes, and irregular warfare in the Southern theater.  National Park S...

Core mechanic — Hidden Camps: Marion establishes two off-road ambush locations.

- Marion and militia units can secretly relocate between them.
- Their first attack after emerging applies **Disarray**, temporarily lowering enemy accuracy, speed, and command bonuses.
- Marion can leave snares, false campfires, and decoy supplies near either camp.

Signature ability — Melt Into the Swamp: Nearby militia disappear from their current locations, leave decoys behind, and reappear at selected ambush points for a synchronized attack.

Gameplay identity: A micro-intensive hero who excels against officers, supply wagons, scouts, and separated portions of a wave.

6. Tadeusz Kościuszko — Fortification and terrain engineer

Kościuszko designed fortifications and used terrain extensively at locations including Saratoga and West Point.  National Park S... +1

Core mechanic — Field Engineering: Kościuszko receives a limited number of **Earthwork Points** each wave. He can construct temporary battlefield features:

- **Trench:** Slows infantry and protects adjacent friendly units.
- **Abatis:** Damages and strips armor from enemies passing through it.

- **Redoubt:** Protects a tower from ranged attacks.
- **Raised Platform:** Increases a tower's range and line of sight.
- **Temporary Bridge:** Creates a new movement option for heroes and friendly troops.

Earthworks may redirect enemies slightly but cannot completely seal a route.

Signature ability — Fortify the Heights: Kościuszko instantly surrounds a selected tower cluster with layered trenches, barriers, and protected firing positions.

Gameplay identity: The strongest terrain-control hero, allowing the player to reshape how a level is defended without simply adding more damage.

7. Marquis de Lafayette — Rapid-response and combined-arms commander

Lafayette commanded American forces in Virginia during 1781 and also helped connect the American cause with French military assistance.  National Park S... +1

Core mechanic — Battlefield Momentum: Lafayette gains Momentum by rapidly moving between threatened lanes.

- Arriving in a lane buffs nearby troops' movement and attack speed.
- Coordinated attacks by different tower classes generate additional Momentum.
- Lafayette can spend it to summon French infantry, cavalry, or an ammunition detachment.

Signature ability — Alliance in Arms: A French detachment reinforces the selected lane while nearby American towers receive reduced cooldowns and combined-arms bonuses.

Gameplay identity: The fastest responder in the main roster. He works best on maps with several separated lanes and frequent emergencies.

8. Paul Revere — Scout and early-warning specialist

Revere served the revolutionary movement as a courier and messenger well before his most famous ride.  National Park S... +1

Core mechanic — Alarm Network: Revere places signal beacons at key points.

- Riding through connected beacons reveals hidden enemies and upcoming wave modifiers.

- Towers near an activated beacon acquire targets faster and begin a wave partially reloaded.
- Revere may start a wave early for bonus resources without imposing the usual readiness penalty.

Signature ability — Midnight Alarm: Every beacon activates simultaneously, revealing stealth units, refreshing towers' opening attacks, and summoning temporary militia at each beacon.

Gameplay identity: An ideal prologue and tutorial hero. He teaches scouting, preparation, and lane awareness before the game introduces more complicated combat systems.

9. Deborah Sampson — Adaptive infantry hero

Sampson served in the Continental Army under an assumed identity and undertook combat and scouting duties.  National Park S... +1

Core mechanic — Three Stances:

- **Scout:** High movement speed, stealth detection, and enemy marking.
- **Rifle:** Long range and strong damage against elites.
- **Bayonet:** Blocks enemies and performs rapid close-range attacks.

Completing a stance-specific action before switching—revealing an enemy, landing a precision shot, or blocking an attacker—generates **Grit**.

Signature ability — Unbroken Service: Sampson temporarily receives the full benefits of all three stances, ignores one incapacitating hit, and can rapidly move between enemies.

Gameplay identity: A mechanically expressive hero whose effectiveness depends on frequent stance switching rather than passive statistics.

10. James Armistead Lafayette — Intelligence and deception specialist

James Armistead Lafayette served as a spy under the Marquis de Lafayette and provided valuable intelligence during the Virginia and Yorktown campaigns.  Army +1

Core mechanic — Intelligence Network: Armistead shadows officers, couriers, and supply units to gather **Intelligence** without immediately entering combat. Intelligence can be spent on:

- **False Orders:** Splits or delays a non-boss enemy formation.
- **Compromised Supplies:** Removes armor, healing, or ammunition bonuses.
- **Marked Officer:** Causes towers to prioritize a command unit and deal bonus damage to it.
- **Counterintelligence:** Reveals disguised, hidden, or decoy enemies.

Signature ability — Double Agent: A selected formation follows a false rally order, moving toward a temporary decoy route. Bosses cannot be redirected, but they lose their command aura and reinforcement abilities.

Gameplay identity: A late-campaign strategy hero who weakens difficult waves before they reach the player’s strongest defenses.

Recommended campaign unlock flow

A mechanically clean progression would be:

Prologue: Paul Revere

Act I — The Army Forms: George Washington, Henry Knox

Act II — The War Expands: Lafayette, Kościuszko

Act III — The Southern Campaign: Nathanael Greene, Daniel Morgan, Francis Marion

Final Act — Virginia and Yorktown: James Armistead Lafayette

Optional challenge unlock: Deborah Sampson

This introduces information and command mechanics first, followed by artillery and terrain control, then the more complicated attrition, formation, stealth, and deception systems.

Mini-campaign hero packages

Because the number of mini-campaigns is not fixed, these are eight modular options. The first six provide the strongest initial mix; Ethan Allen and Polly Cooper work well as later expansions.

Mini-campaign	New hero and mechanic	Approximate five-level arc
1. War at Sea	John Paul Jones — Ship Command. Jones commands a vessel moving along water lanes, selecting which side fires a broadside and when to launch boarding parties. On maps without navigable water, he calls offshore fire and deploys marines. Jones served in the Continental Navy and became its most celebrated Revolutionary War commander.	Convoy escort → coastal raid → blockade run → frigate duel → enemy flagship

Mini-campaign	New hero and mechanic	Approximate five-level arc
2. The Gulf Coast Campaign	Bernardo de Gálvez — Amphibious Siege. Captures landing zones, brings multinational reinforcements ashore, and turns captured coastal guns against their former owners. Gálvez led Spanish campaigns that captured British positions including Baton Rouge, Mobile, and Pensacola.  National Park S... +1	Mississippi supply route → river fort → Mobile assault → fortified harbor → Pensacola siege
3. The Defense of Fort Washington	Margaret Corbin — Last Gun. Corbin can instantly crew an abandoned or disabled artillery emplacement. Her reload speed and resistance increase as nearby defenses are destroyed. Corbin served a cannon during the Battle of Fort Washington and was badly wounded during the engagement.  National Park S... +1	Prepare batteries → counter-battery duel → defend outer works → survive the breach → cover the evacuation
4. Winter at Valley Forge	Friedrich Wilhelm von Steuben — Drillmaster. Units train between waves, gaining permanent veterancy and formation bonuses during the level. He can rapidly organize scattered militia into a disciplined firing line. Von Steuben worked to establish uniform drills and maneuvers for the Continental Army at Valley Forge.  National Park S... +1	Muster the camp → train a model company → coordinate volleys → bayonet drill under attack → battlefield test
5. Patriots at Bunker Hill	Peter Salem — Make Every Shot Count. Salem uses limited ammunition but deals very high precision damage. Eliminating officers or striking weak points restores ammunition and inspires nearby militia. Salem fought at Lexington and Concord and at Bunker Hill; accounts of his exact actions at Bunker Hill later became part of the battle's legend.  National Park S... +1	Battle Road → fortify Breed's Hill → conserve ammunition → defend the redoubt → fighting retreat
6. Redoubt Number 10	Alexander Hamilton — Assault Chain. Hamilton captures forward objectives and gains stacking movement, attack, and cooldown bonuses as the assault advances. Losing momentum resets the chain. Hamilton led the successful nighttime attack on Redoubt 10 during the Siege of Yorktown.  National Park S... +1	Dig approach trenches → silence batteries → nighttime reconnaissance → storm Redoubt 10 → hold against counterattack

Mini-campaign	New hero and mechanic	Approximate five-level arc
7. The Green Mountain Boys	Ethan Allen — Seize the Fort. Allen can capture enemy defensive structures and convert them into temporary Patriot towers. Undetected opening attacks delay the enemy alarm. Allen and the Green Mountain Boys participated in the surprise capture of Fort Ticonderoga.  National Park S... +1	Recruit militia → scout the fort → dawn assault → seize artillery stores → defend the captured corridor
8. The Oneida Alliance	Polly Cooper — Winter Stores. Cooper converts forage and supply pickups into rations that heal troops, prevent morale loss, and keep towers functioning during shortages. She can establish one protected kitchen and medical-support camp. Cooper was part of an Oneida delegation that brought food to the undersupplied army at Valley Forge and remained to assist the soldiers.  National Park S... +1	Escort the delegation → protect the provisions → establish the winter camp → survive a supply crisis → prepare the army to march

Mini-campaign progression model

Each five-level mini-campaign should teach its hero in stages rather than granting the complete kit immediately:

1. **Level 1:** Hero movement, attack, and passive mechanic.
2. **Level 2:** First active ability.
3. **Level 3:** A level built specifically around the mechanic's weakness.
4. **Level 4:** Second ability or major upgrade branch.
5. **Level 5:** Full kit and signature ability against a capstone encounter.

Completing the mini-campaign should unlock that hero for campaign replays, challenge maps, and survival mode. Keeping mini-campaign heroes out of a player's first main-campaign run prevents later downloadable content from disrupting the original difficulty curve.

Mechanical coverage

The ten main heroes each use a different personal system:

Resolve, artillery ammunition, Fatigue, tactical lines, hidden camps, Earthwork Points, Momentum, signal beacons, Grit, and Intelligence.

That distinction is important. It prevents the roster from becoming ten variations of “stand near towers and increase their damage,” while also giving every hero a clear visual interface and recognizable playstyle.

For production, the strongest initial mini-campaign slate is **John Paul Jones, Bernardo de Gálvez, Margaret Corbin, von Steuben, Peter Salem, and Alexander Hamilton**, with **Ethan Allen and Polly Cooper** held as expansion slots.
